

Clinical application of FES for the upper limb

This one-day course is intended to enable participants to assess and treat patients for FES applied to the upper limb.

The course will be led by an experienced FES clinician and is aimed at healthcare professionals. Teaching is through some taught sessions, including a review of the basic theory, but there is also a large practical content where participants will be able to use the stimulator on themselves and on patient volunteers. These practical sessions will therefore reinforce the theory. Each participant will receive course notes and further information to support their learning. After the course, participants are able to retain the stimulator on a 2 month free-loan.

Course participants should be prepared to try the applications on themselves before trying them on patients. Please therefore wear a loose top or t-shirt.
